

Exam / Exam

US ABDOMEN/PELVIS- PEDIATRIC ABDOMINAL PAIN

Date of exam / Exam Date

May 09, 2019 14:36

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with inflammatory bowel disease and acute abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. No evidence of cholecystitis. Both kidneys are symmetric in size and show normal corticomedullary differentiation. No evidence of splenomegaly. No evidence of cystitis. No secondary signs of appendicitis. Complex fluid with internal echoes. No abnormal bowel wall thickening.

IMPRESSION:

Findings indeterminate; repeat ultrasound may be required.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-T40XN6-13364
