US ABDOMEN/PELVIS- INTESTINAL OBSTRUCTION

Date of exam / Exam Date

September 22, 2024 12:04

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Patient with previous appendectomy presenting with RLQ pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver appears homogeneous. The liver shows mild increased echogenicity, likely due to technical factors. No sludge or masses. Gallbladder demonstrates normal wall thickness. Kidneys show normal Doppler flow. Splenic contour is smooth. No intravesical masses or debris. No secondary signs of appendicitis. Complex free fluid in RLQ. Complex fluid collection 3.6cm in RLQ, consistent with abscess. Liver contour is smooth; no masses seen.

IMPRESSION:

Study limited; cannot exclude early appendicitis.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-1GRMPL-12253
