US ABDOMEN/PELVIS- POST-SURGICAL PAIN

Date of exam / Exam Date

April 22, 2018 10:05

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

5-year-old Male with suspected Crohn's disease and abdominal tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver is normal in size and echotexture. No peri-hepatic fluid seen. Gallbladder wall is thin. No gallstones, wall thickening, or pericholecystic fluid. Mildly increased echogenicity of renal cortex; clinical significance uncertain. Spleen is mildly enlarged, likely reactive. Spleen size within normal limits. The bladder is fluid-filled and unremarkable. Appendix is visualized and normal, measuring 5mm. It is compressible with normal wall thickness. Small amount free fluid in RLQ adjacent to appendix. Small bowel loops distended, clinical significance uncertain.

IMPRESSION:

Study is normal.

Recommend urgent surgical consultation.
