US ABDOMEN/PELVIS- SUSPECTED APPENDICITIS

Date of exam / Exam Date

March 02, 2020 08:11

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with history of recurrent gastroenteritis and abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. Gallbladder demonstrates normal wall thickness. No abnormal Doppler signals in gallbladder. The right kidney measures 7.9cm and the left kidney measures 7.6cm. Both kidneys are unremarkable. No signs of pyelonephritis. No abnormal Doppler flow in spleen. Bladder appears normal. Technical factors limit visualization of appendix. Free fluid with echoes, suggestive of inflammation. No signs of Crohn's disease.

IMPRESSION:

Study limited; cannot exclude early appendicitis.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-B57CIP-10649
