US ABDOMEN/PELVIS- SUSPECTED TUMOR

Date of exam / Exam Date

December 20, 2022 00:11

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

6-year-old Male with suspected Crohn's disease and abdominal tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No abnormal Doppler flow. Liver echogenicity is within normal limits. No evidence of cholecystitis. Mildly increased echogenicity of renal cortex; clinical significance uncertain. No evidence of splenomegaly. No intravesical masses or debris. Dilated, non-compressible appendix in pre-ileal region, measuring 6mm with wall thickening and hyperemia. Moderate free fluid in pelvis. No abnormal Doppler flow in bowel loops.

IMPRESSION:

Appendicitis with peri-appendiceal inflammation.

Recommend urgent surgical consultation.

Case ID: CASE-3PT3AF-13280
