US ABDOMEN/PELVIS- ABDOMINAL SWELLING

Date of exam / Exam Date

September 29, 2020 02:26

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

14-year-old Male with post-surgical abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. Gallbladder wall is thin. No sludge or masses. No perinephric fluid collections. No focal splenic lesions noted. Bladder wall shows no abnormal thickening. No appendicolith detected. Complex fluid with internal echoes. No evidence of abscess or phlegmon.

IMPRESSION:

Appendix is normal. No findings suggest appendicitis.

Recommend follow-up as indicated.

Case ID: CASE-H4DC5C-11735
