US ABDOMEN/PELVIS- POST-SURGICAL PAIN

Date of exam / Exam Date

July 11, 2021 10:14

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with palpable RLQ mass and pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. No focal hepatic lesions detected. No abnormal Doppler signals in gallbladder. Mildly increased echogenicity of renal cortex; clinical significance uncertain. Renal parenchyma appears homogeneous. Spleen appears normal for age. No intravesical masses or debris. No abnormal peri-appendiceal findings. Trace free fluid in pelvis, non-specific. Prominent mesenteric lymph nodes in RLQ, largest 5mm.

IMPRESSION:

Mesenteric adenitis identified; appendix normal.

Consider CT if diagnosis remains unclear.

Case ID: CASE-5DWWVQ-12165
