

## # Exam / Exam

US ABDOMEN/PELVIS- UNEXPLAINED WEIGHT LOSS

Date of exam / Exam Date

January 16, 2024 20:58

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

15-year-old Male presenting with intermittent abdominal pain and vomiting.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

No focal hepatic lesions detected. Liver margins are regular and smooth. No evidence of cholecystitis. No sonographic findings suggestive of cholecystitis. Kidneys show normal Doppler flow. Both kidneys are symmetric in size and show normal corticomedullary differentiation. Spleen appears normal for age. No vesicoureteral reflux seen. Significantly dilated (12mm) appendix, non-compressible, with wall edema. Minimal pelvic fluid, likely physiologic. Complex fluid collection 4.2cm in RLQ, consistent with abscess.

### IMPRESSION:

Appendicitis with peri-appendiceal inflammation.

Recommend urgent surgical consultation.

Case ID: CASE-HQNJFS-10216
