US ABDOMEN/PELVIS- INTUSSUSCEPTION

Date of exam / Exam Date

January 16, 2019 17:46

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with hematuria and right-sided abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Liver contour is smooth; no masses seen. Liver parenchyma is normal. The gallbladder is unremarkable. No sludge or masses. Renal sinus anatomy is intact. Splenic contour is smooth. Spleen appears normal for age. No post-void residual urine detected. Appendix not definitively visualized due to bowel gas. No peritoneal fluid collections. Reactive mesenteric adenopathy with largest node 12mm.

IMPRESSION:

Mesenteric adenitis confirmed by imaging.

Consider CT if diagnosis remains unclear.
