

Exam / Exam

US ABDOMEN/PELVIS- PALPABLE MASS

Date of exam / Exam Date

October 29, 2019 20:01

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child presenting with unexplained fever and RLQ discomfort.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Mild hepatomegaly noted; otherwise unremarkable. No gallstones, wall thickening, or pericholecystic fluid. No signs of pyelonephritis. Renal parenchyma appears homogeneous. Spleen appears normal for age. Bladder demonstrates normal wall thickness. Dilated, non-compressible appendix in anterior pelvis, measuring 10mm with wall thickening and hyperemia. Trace free fluid in pelvis, non-specific. Mild ascites noted. No focal hepatic lesions detected. Small bowel loops distended, clinical significance uncertain.

IMPRESSION:

Acute appendicitis with secondary signs present.

Recommend urgent surgical consultation.

Case ID: CASE-XYERXR-10501
