US ABDOMEN/PELVIS- PALPABLE MASS

Date of exam / Exam Date

March 08, 2023 22:19

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

13-year-old Male with suspected Crohn's disease and abdominal tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Mild hepatomegaly noted; otherwise unremarkable. No gallstones, wall thickening, or pericholecystic fluid. The right kidney measures 7.7cm and the left kidney measures 7.8cm. Both kidneys are unremarkable. Spleen is mildly enlarged, likely reactive. Bladder demonstrates normal wall thickness. No secondary signs of appendicitis. Free fluid with echoes, suggestive of inflammation. Mild bowel wall thickening of terminal ileum.

IMPRESSION:

Study limited; cannot exclude early appendicitis.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-7NJYWF-13303
