

## # Exam / Exam

US ABDOMEN/PELVIS- SUSPECTED ABSCESS

Date of exam / Exam Date

July 23, 2023 16:44

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

4-year-old Male presenting with intermittent abdominal pain and vomiting.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. Liver margins are regular and smooth. No evidence of cholecystitis. Renal parenchyma appears homogeneous. Mildly increased echogenicity of renal cortex; clinical significance uncertain. No focal splenic lesions noted. Bladder wall is smooth and regular. Appendix not clearly identified despite thorough evaluation. Small amount free fluid in RLQ adjacent to appendix. No significant lymphadenopathy.

### IMPRESSION:

Indeterminate RLQ findings.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.
