US ABDOMEN/PELVIS- INTUSSUSCEPTION

Date of exam / Exam Date

November 16, 2020 17:37

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with history of recurrent gastroenteritis and abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Mild hepatomegaly noted; otherwise unremarkable. The liver shows mild increased echogenicity, likely due to technical factors. Gallbladder is contracted, no abnormal findings. Kidneys are normal in size and echotexture for age. Mildly increased echogenicity of renal cortex; clinical significance uncertain. Splenic contour is smooth. The bladder is fluid-filled and unremarkable. No secondary signs of appendicitis. Small amount free fluid in RLQ adjacent to appendix. No sonographic evidence of intussusception.

IMPRESSION:

Equivocal findings; clinical correlation advised.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-2VPQ08-12301
