

## # Exam / Exam

US ABDOMEN/PELVIS- UNEXPLAINED FEVER

Date of exam / Exam Date

April 18, 2022 14:22

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

11-year-old Male with suspected Crohn's disease and abdominal tenderness.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. Mild hepatomegaly noted; otherwise unremarkable. Gallbladder wall is thin. Kidneys are normal in size and echotexture for age. The right kidney measures 7.6cm and the left kidney measures 7.0cm. Both kidneys are unremarkable. No evidence of splenomegaly. No evidence of cystitis. Significantly dilated (11mm) appendix, non-compressible, with wall edema. Trace free fluid in pelvis, non-specific. Mild ascites noted.

### IMPRESSION:

Findings consistent with acute appendicitis.

Recommend urgent surgical consultation.

Case ID: CASE-Y6VTE5-12956
