US ABDOMEN/PELVIS- PREVIOUS APPENDECTOMY

Date of exam / Exam Date

February 11, 2020 15:46

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

7-year-old Female with 3 days of RLQ pain and guarding.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver is normal in size and echotexture. No evidence of cholecystitis. No sonographic findings suggestive of cholecystitis. No signs of pyelonephritis. Spleen is mildly enlarged, likely reactive. Spleen size within normal limits. The bladder is fluid-filled and unremarkable. Visualization limited by patient movement and bowel gas. Minimal pelvic fluid, likely physiologic. Mild bowel wall thickening of terminal ileum.

IMPRESSION:

Inconclusive study for appendicitis.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-PCK8X5-10726
