US ABDOMEN/PELVIS- POST-SURGICAL PAIN

Date of exam / Exam Date

May 18, 2021 02:57

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with abdominal distention and tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Mild hepatomegaly noted; otherwise unremarkable. The liver appears homogeneous. No sludge or masses. Kidneys show normal Doppler flow. No abnormal Doppler flow in spleen. Bladder wall shows no abnormal thickening. Blind-ending tubular RLQ structure, 9mm, with increased vascularity. Complex fluid with internal echoes. Mesenteric fat appears normal.

IMPRESSION:

Acute appendicitis.

Recommend urgent surgical consultation.

Case ID: CASE-342RCI-11795
