US ABDOMEN/PELVIS- PALPABLE ABDOMINAL MASS

Date of exam / Exam Date

October 26, 2021 07:37

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

2-year-old Female presenting with intermittent abdominal pain and vomiting.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Liver margins are regular and smooth. The liver shows mild increased echogenicity, likely due to technical factors. No abnormal Doppler signals in gallbladder. Gallbladder wall is thin. No perinephric fluid collections. Renal parenchyma appears homogeneous. No evidence of splenomegaly. No vesicoureteral reflux seen. No evidence of inflammation in RLQ. No free fluid seen in abdomen or pelvis. Prominent mesenteric lymph nodes in RLQ, largest 13mm.

IMPRESSION:

Prominent mesenteric lymph nodes; clinical correlation recommended.

Consider CT if diagnosis remains unclear.

Case ID: CASE-K2B01T-12297
