

Exam / Exam

US ABDOMEN/PELVIS- VOMITING WITH ABDOMINAL PAIN

Date of exam / Exam Date

August 27, 2018 15:12

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with inflammatory bowel disease and acute abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No focal hepatic lesions detected. Gallbladder demonstrates normal wall thickness. No abnormal Doppler signals in gallbladder. Mildly increased echogenicity of renal cortex; clinical significance uncertain. The spleen measures 4.9cm and is unremarkable. Bladder wall is smooth and regular. Appendix wall shows increased Doppler flow. Trace free fluid in pelvis, non-specific. Prominent mesenteric lymph nodes in RLQ, largest 20mm.

IMPRESSION:

Acute appendicitis.

Recommend urgent surgical consultation.

Case ID: CASE-RP50VZ-13866
