US ABDOMEN/PELVIS- ABDOMINAL SWELLING

Date of exam / Exam Date

November 10, 2021 18:49

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

3-year-old Female with suspected Crohn's disease and abdominal tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No signs of portal hypertension. No focal hepatic lesions detected. No evidence of cholecystitis. Kidneys are normal in size and echotexture for age. No evidence of splenomegaly. Bladder wall shows no abnormal thickening. No abnormal peri-appendiceal findings. Complex fluid with internal echoes. Mild ascites noted. Liver echogenicity is within normal limits.

IMPRESSION:

Findings indeterminate; repeat ultrasound may be required.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-MQ7FN5-12726
