

## # Exam / Exam

US ABDOMEN/PELVIS- UNEXPLAINED FEVER

Date of exam / Exam Date

April 24, 2019 20:19

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with hematuria and right-sided abdominal pain.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

Liver margins are regular and smooth. No evidence of hepatic steatosis. Gallbladder demonstrates normal wall thickness. Mildly increased echogenicity of renal cortex; clinical significance uncertain. No perinephric fluid collections. Spleen is mildly enlarged, likely reactive. The bladder is fluid-filled and unremarkable. Appendix not definitively visualized due to bowel gas. Trace free fluid in pelvis, non-specific. Complex fluid collection 1.4cm in RLQ, consistent with abscess. Reactive mesenteric lymphadenopathy seen.

### IMPRESSION:

Appendix not seen, no secondary signs.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-GWEUSG-11220
