

## # Exam / Exam

US ABDOMEN/PELVIS- SUSPECTED ABSCESS

Date of exam / Exam Date

May 17, 2024 22:55

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

8-year-old Male with several hours of RLQ pain and pain migration.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

No hepatic cysts or vascular anomalies. The liver shows mild increased echogenicity, likely due to technical factors. No sludge or masses. No evidence of cholecystitis. No perinephric fluid collections. The spleen measures 5.1cm and is unremarkable. Bladder demonstrates normal wall thickness. Visualization limited by patient movement and bowel gas. No free fluid seen in abdomen or pelvis. Mesenteric fat appears normal.

### IMPRESSION:

Equivocal findings; clinical correlation advised.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.
