US ABDOMEN/PELVIS- PALPABLE ABDOMINAL MASS

Date of exam / Exam Date

May 26, 2020 03:43

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with abdominal distention and tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No focal hepatic lesions detected. Gallbladder demonstrates normal wall thickness. No sonographic findings suggestive of cholecystitis. Kidneys are normal in size and echotexture for age. Spleen is mildly enlarged, likely reactive. Bladder demonstrates normal wall thickness. Appendix wall shows increased Doppler flow. No peritoneal fluid collections. Small bowel loops distended, clinical significance uncertain. No evidence of abscess or phlegmon.

IMPRESSION:

Appendicitis confirmed by ultrasound.

Recommend urgent surgical consultation.
