

## # Exam / Exam

US ABDOMEN/PELVIS- PEDIATRIC ABDOMINAL PAIN

Date of exam / Exam Date

August 03, 2019 02:43

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with inflammatory bowel disease and acute abdominal pain.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

Liver contour is smooth; no masses seen. Gallbladder is contracted, no abnormal findings. Kidneys are normal in size and echotexture for age. Spleen appears normal for age. No evidence of cystitis. Complex RLQ inflammatory mass, dilated appendix (14mm), focal wall defect, free fluid. Free fluid with echoes, suggestive of inflammation. Mild bowel wall thickening of terminal ileum.

### IMPRESSION:

Perforated appendicitis with abscess formation.

Recommend urgent surgical consultation.
