

Exam / Exam

US ABDOMEN/PELVIS- PREVIOUS APPENDECTOMY

Date of exam / Exam Date

September 30, 2022 05:10

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with abdominal distention and tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No hepatic cysts or vascular anomalies. No abnormal Doppler flow. Gallbladder is well-distended and normal. No evidence of cholecystitis. No signs of pyelonephritis. No perinephric fluid collections. Splenic contour is smooth. No evidence of cystitis. Complex fluid tracking into pelvis, suggestive of perforation. No peritoneal fluid collections. No evidence of bowel obstruction.

IMPRESSION:

Appendicitis with findings suggestive of perforation.

Recommend urgent surgical consultation.

Case ID: CASE-Q5SU6S-12014
