US ABDOMEN/PELVIS- ABDOMINAL SWELLING

Date of exam / Exam Date

March 05, 2023 14:01

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with abdominal distention and tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Liver margins are regular and smooth. The liver shows mild increased echogenicity, likely due to technical factors. Gallbladder wall is thin. No gallstones, wall thickening, or pericholecystic fluid. No perinephric fluid collections. No abnormal Doppler flow in spleen. No intravesical masses or debris. Appendix not clearly identified despite thorough evaluation. Loculated fluid in pelvis. Mild ascites noted. The liver shows mild increased echogenicity, likely due to technical factors. Complex fluid collection 2.3cm in RLQ, consistent with abscess.

IMPRESSION:

Indeterminate RLQ findings.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-0LII49-12955
