

Exam / Exam

US ABDOMEN/PELVIS- APPENDICITIS

Date of exam / Exam Date

September 24, 2022 18:44

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

12-year-old Male presenting with intermittent abdominal pain and vomiting.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No evidence of hepatic steatosis. No abnormal Doppler flow. Gallbladder wall is thin. Gallbladder is well-distended and normal. Mildly increased echogenicity of renal cortex; clinical significance uncertain. The spleen measures 6.4cm and is unremarkable. The bladder is fluid-filled and unremarkable. Free fluid adjacent to appendix. Complex free fluid in RLQ. No evidence of abscess or phlegmon. The liver shows mild increased echogenicity, likely due to technical factors.

IMPRESSION:

Acute RLQ inflammation, likely appendicitis.

Recommend urgent surgical consultation.

Case ID: CASE-CXJ7M5-13207
