US ABDOMEN/PELVIS- SUSPECTED CROHN'S DISEASE

Date of exam / Exam Date

April 05, 2023 18:27

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with recent onset fever and persistent abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No focal hepatic lesions detected. No sonographic findings suggestive of cholecystitis. Both kidneys are symmetric in size and show normal corticomedullary differentiation. Spleen appears normal for age. No post-void residual urine detected. Visualization limited by patient movement and bowel gas. Complex free fluid in RLQ. Small bowel loops distended, clinical significance uncertain.

IMPRESSION:

Study limited; cannot exclude early appendicitis.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-PS8DEA-11844
