

# PROTOCOLE OPERATOIRE / OPERATIVE REPORT

Site: Hopital de Verdun

Date: 2024-08-08 18:54

Anesthésiste / Anesthetist: Dr. Aisha Patel

Chirurgien / Surgeon: Dr. Robert Tremblay

Assistant(s): Dr. resident Emily Clark

Diagnostic préopératoire / Pre-operative diagnosis:

**APPENDICITIS WITH SEPSIS.**

Diagnostic postopératoire / Post-operative diagnosis:

**APPENDICITIS WITH BOWEL OBSTRUCTION.**

Opération / Operation:

**APPENDECTOMY WITH INTRA-ABDOMINAL DRAINAGE.**

Tissu envoyé en pathologie / Tissue sent to pathology: Appendix with attached omentum

Anesthésie / Anesthesia: General anesthesia with nitrous oxide

## Historique et constatations opératoires / History and operative findings:

16-year-old female with one week abdominal pain, markedly elevated WBC, high CRP, no fever. Imaging: MRI demonstrating RLQ inflammation. recent travel.

## Procédure(s) opératoire(s) / Operative procedure(s):

Patient in supine position. General anesthesia with nitrous oxide administered. Time-out was performed and abdomen prepped in sterile fashion. A small infraumbilical incision is made and the abdominal cavity is entered under direct vision. Supplementary ports are placed in the suprapubic area and left iliac fossa. No iatrogenic injuries occurred during trocar placement. Upon entering the abdominal cavity, moderate adhesions noted. Operative findings included hyperemic appendix and intense inflammation. A small localized abscess was found and drained. Minimal adhesions were noted. Surrounding omentum and bowel are separated from the inflammatory mass. The mesoappendix is dissected and the appendiceal artery is controlled with electrocautery. Absorbable ligatures are applied prior to amputation. Specimen placed in EndoCatch bag for removal. Copious irrigation is undertaken to ensure removal of all inflammatory debris. Umbilical port site is closed with PDS 2-0 and skin with subcuticular Vicryl 4-0.

Early ambulation and supportive care recommended. The patient tolerated the procedure well with minimal blood loss.
