US ABDOMEN/PELVIS- SUSPECTED ABSCESS

Date of exam / Exam Date

December 04, 2018 11:42

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

9-year-old Male with sudden onset of abdominal pain and history of constipation.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No signs of portal hypertension. Liver parenchyma is normal. Gallbladder is contracted, no abnormal findings. Gallbladder is well-distended and normal. Mildly increased echogenicity of renal cortex; clinical significance uncertain. Splenic parenchyma is homogeneous. No post-void residual urine detected. Appendix shows normal vascularity on Doppler. Loculated fluid in pelvis. No evidence of bowel obstruction. The liver shows mild increased echogenicity, likely due to technical factors.

IMPRESSION:

Study is normal.

Recommend laboratory correlation.
