US ABDOMEN/PELVIS- UNEXPLAINED WEIGHT LOSS

Date of exam / Exam Date

September 28, 2020 20:03

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with constipation and abdominal distention.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

Liver contour is smooth; no masses seen. No evidence of cholecystitis. Gallbladder demonstrates normal wall thickness. No perinephric fluid collections. Mildly increased echogenicity of renal cortex; clinical significance uncertain. Spleen size within normal limits. Splenic contour is smooth. Bladder is well-distended and normal. No free fluid or fat stranding detected. Small amount free fluid in RLQ adjacent to appendix. Complex fluid collection 3.2cm in RLQ, consistent with abscess. No abnormal fluid collection detected.

IMPRESSION:

Equivocal findings; clinical correlation advised.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.
