

# PROTOCOLE OPERATOIRE / OPERATIVE REPORT

Site: Children's Hospital

Date: 2023-10-18 10:23

Anesthésiste / Anesthetist: Dr. Lisa Garcia

Chirurgien / Surgeon: Dr. Ahmed Khan

Assistant(s): Dr. resident Jake Turner

Diagnostic préopératoire / Pre-operative diagnosis:

**SUPPURATIVE APPENDICITIS.**

Diagnostic postopératoire / Post-operative diagnosis:

**SUPPURATIVE APPENDICITIS.**

Opération / Operation:

**LAPAROSCOPIC APPENDECTOMY WITH OMENTAL WRAPPING.**

Tissu envoyé en pathologie / Tissue sent to pathology: Appendix and peri-appendiceal tissue

Anesthésie / Anesthesia: General endotracheal anesthesia

## Historique et constatations opératoires / History and operative findings:

A 4-year-old female with 3 days history of abdominal pain with distention. Failed conservative management for renal colic. Imaging: CT scan revealing free fluid.

## Procédure(s) opératoire(s) / Operative procedure(s):

Patient in supine position. General anesthesia with regional block administered. Time-out was performed and abdomen prepped in sterile fashion. Direct trocar insertion after skin and fascia incision. Accessory port placed in epigastric region. No iatrogenic injuries occurred during trocar placement. Upon entering the abdominal cavity, minimal adhesions noted. The appendix was suppurative with minimal inflammation. There was a contained abscess in the right lower quadrant. Severe adhesions required careful lysis. Meticulous dissection performed due to distorted anatomy. Appendiceal vessels controlled with clips. We apply an endoscopic stapler to the base of the appendix and divide it. Specimen placed in EndoCatch bag for removal. Thorough irrigation of the abdominal cavity is performed, removing all purulent material. All port sites closed with non-absorbable Prolene 4-0.

Discharge home when tolerating oral intake and afebrile. The patient tolerated the procedure well with minimal blood loss.

Case ID: CASE-JPX9V3-10014
