

Exam / Exam

US ABDOMEN/PELVIS- DIARRHEA

Date of exam / Exam Date

September 20, 2020 20:02

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with recent onset fever and persistent abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. No sludge or masses. Gallbladder wall is thin. Both kidneys are symmetric in size and show normal corticomedullary differentiation. No perinephric fluid collections. No abnormal Doppler flow in spleen. No evidence of cystitis. Significantly dilated (10mm) appendix, non-compressible, with wall edema. No free fluid seen in abdomen or pelvis. No evidence of abscess or phlegmon. Liver parenchyma is normal.

IMPRESSION:

Acute appendicitis with secondary signs present.

Recommend urgent surgical consultation.

Case ID: CASE-25X1EJ-11476
