

## # Exam / Exam

US ABDOMEN/PELVIS- UNEXPLAINED FEVER

Date of exam / Exam Date

May 08, 2019 11:40

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with inflammatory bowel disease and acute abdominal pain.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

The liver appears homogeneous. No gallstones, wall thickening, or pericholecystic fluid. No sonographic findings suggestive of cholecystitis. The right kidney measures 5.0cm and the left kidney measures 5.0cm. Both kidneys are unremarkable. Kidneys are normal in size and echotexture for age. No evidence of splenomegaly. No post-void residual urine detected. Loss of normal appendix wall layers noted. Complex free fluid in RLQ. No mesenteric lymphadenopathy seen. Liver contour is smooth; no masses seen.

### IMPRESSION:

Findings consistent with perforated appendicitis.

Recommend urgent surgical consultation.

Case ID: CASE-FLZOVK-12795
