

## # Exam / Exam

US ABDOMEN/PELVIS- URINARY TRACT INFECTION

Date of exam / Exam Date

May 29, 2021 14:52

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with recent onset fever and persistent abdominal pain.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

No evidence of hepatic steatosis. Liver contour is smooth; no masses seen. The gallbladder is unremarkable. Kidneys are normal in size and echotexture for age. No evidence of splenomegaly. No post-void residual urine detected. No peri-appendiceal fat stranding or fluid. Complex fluid with internal echoes. Mild bowel wall thickening of terminal ileum. The liver shows mild increased echogenicity, likely due to technical factors.

### IMPRESSION:

Abdominal ultrasound within normal limits.

Clinical observation recommended.

Case ID: CASE-RXHVER-11451
