US ABDOMEN/PELVIS- UNEXPLAINED VOMITING

Date of exam / Exam Date

March 28, 2023 01:56

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with inflammatory bowel disease and acute abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No abnormal Doppler flow. Liver parenchyma is normal. No abnormal Doppler signals in gallbladder. No renal calculi, masses, or hydronephrosis detected. No focal splenic lesions noted. Bladder appears normal. Blind-ending tubular RLQ structure, 7mm, with increased vascularity. Complex free fluid in RLQ. Complex fluid collection 4.2cm in RLQ, consistent with abscess.

IMPRESSION:

Findings consistent with acute appendicitis.

Recommend urgent surgical consultation.

Case ID: CASE-65REMS-13077
