

## # Exam / Exam

US ABDOMEN/PELVIS- SUSPECTED TUMOR

Date of exam / Exam Date

December 20, 2018 08:24

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

17-year-old Female with suspected Crohn's disease and abdominal tenderness.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

The liver appears homogeneous. No signs of portal hypertension. No evidence of cholecystitis. The gallbladder is unremarkable. Kidneys show normal Doppler flow. No renal calculi, masses, or hydronephrosis detected. No focal splenic lesions noted. No intravesical masses or debris. Appendix not clearly visualized; moderate complex free fluid consistent with perforation. Complex fluid with internal echoes. No evidence of tumor or mass. Liver margins are regular and smooth.

### IMPRESSION:

Perforated appendix, abscess identified.

Recommend urgent surgical consultation.
