US ABDOMEN/PELVIS- SUSPECTED ABSCESS

Date of exam / Exam Date

August 08, 2024 03:34

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

8-year-old Female with sudden onset of abdominal pain and history of constipation.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. No evidence of cholecystitis. No signs of pyelonephritis. No perisplenic fluid collections. Bladder is well-distended and normal. Appendix wall shows increased Doppler flow. Complex free fluid in RLQ. No abnormal Doppler flow in bowel loops. No hepatic cysts or vascular anomalies.

IMPRESSION:

Findings consistent with acute appendicitis.

Recommend urgent surgical consultation.

Case ID: CASE-MHQPXL-11034
