US ABDOMEN/PELVIS- ABDOMINAL SWELLING

Date of exam / Exam Date

May 16, 2020 22:03

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with unexplained weight loss, abdominal pain, and diarrhea.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. No focal hepatic lesions detected. Gallbladder demonstrates normal wall thickness. No sludge or masses. Kidneys are normal in size and echotexture for age. Both kidneys are symmetric in size and show normal corticomedullary differentiation. The spleen measures 4.5cm and is unremarkable. Bladder wall is smooth and regular. Appendix not visualized, may be normal in children. Loculated fluid in pelvis. Mesenteric fat appears normal. No abnormal fluid collection detected.

IMPRESSION:

Study limited; cannot exclude early appendicitis.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-IOWPWE-11670
