

PROTOCOLE OPERATOIRE / OPERATIVE REPORT

Site: MCH

Date: 2024-01-10 15:24

Anesthésiste / Anesthetist: Dr. Kevin Zhang

Chirurgien / Surgeon: Dr. Robert Tremblay

Assistant(s): Dr. resident Jennifer Park

Diagnostic préopératoire / Pre-operative diagnosis:

APPENDICITIS WITH INTUSSUSCEPTION.

Diagnostic postopératoire / Post-operative diagnosis:

PERFORATED APPENDICITIS WITH ABSCESS.

Opération / Operation:

APPENDECTOMY WITH LYSIS OF ADHESIONS.

Tissu envoyé en pathologie / Tissue sent to pathology: Appendix

Anesthésie / Anesthesia: General anesthesia with regional block

Historique et constatations opératoires / History and operative findings:

A 2-year-old non-binary who presented with abdominal pain with distention. Initially evaluated 1 days prior and diagnosed with food poisoning. Now has elevated WBC, elevated CRP, no fever. Imaging: CT scan confirming appendicitis. Past medical history is otherwise unremarkable.

Procédure(s) opératoire(s) / Operative procedure(s):

Patient in supine position. General anesthesia and epidural block administered. Time-out was performed and abdomen prepped in sterile fashion. We create a 1 cm infraumbilical incision and enter the abdomen using the Hasson technique. Accessory port placed in epigastric region. No iatrogenic injuries occurred during trocar placement. Upon entering the abdominal cavity, extensive adhesions noted. Findings include acutely inflamed appendix with severe inflammatory changes. A small localized abscess was found and drained. Multiple bowel loops adherent to the mass. We proceed with careful dissection of the appendiceal attachments. The appendiceal mesentery is carefully taken down with harmonic scalpel. Endoscopic stapling is used for appendiceal division. Specimen placed in EndoCatch bag for removal. Abdominal lavage performed until clear. Umbilical port site is closed with Polysorb 2-0 and skin with subcuticular Vicryl 4-0.

Postoperative imaging if fever persists. The patient tolerated the procedure well with minimal blood loss.
