

## # Exam / Exam

US ABDOMEN/PELVIS- APPENDICITIS

Date of exam / Exam Date

February 17, 2020 01:46

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

17-year-old Female with several hours of RLQ pain and recent trauma.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

No hepatic cysts or vascular anomalies. No evidence of hepatic steatosis. The gallbladder is unremarkable. The right kidney measures 9.5cm and the left kidney measures 9.4cm. Both kidneys are unremarkable. Splenic parenchyma is homogeneous. No abnormal Doppler flow in spleen. No post-void residual urine detected. Appendix not clearly identified despite thorough evaluation. Free fluid with echoes, suggestive of inflammation. Prominent mesenteric lymph nodes in RLQ, largest 7mm.

### IMPRESSION:

Indeterminate RLQ findings.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.
