US ABDOMEN/PELVIS- INFLAMMATORY BOWEL DISEASE

Date of exam / Exam Date

September 26, 2020 11:35

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with abdominal distention and tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. Liver contour is smooth; no masses seen. Gallbladder is contracted, no abnormal findings. No gallstones, wall thickening, or pericholecystic fluid. No renal calculi, masses, or hydronephrosis detected. Kidneys are normal in size and echotexture for age. Spleen is mildly enlarged, likely reactive. No vesicoureteral reflux seen. Appendix shows normal vascularity on Doppler. Free fluid with echoes, suggestive of inflammation. Visualized bowel loops are unremarkable. Liver contour is smooth; no masses seen.

IMPRESSION:

Appendix is normal. No findings suggest appendicitis.

Clinical observation recommended.

Case ID: CASE-HIG6AE-11050
