A vertical infraumbilical incision is made and carried down to the fascia which is incised sharply. Accessory port placed in epigastric region. No iatrogenic injuries occurred during trocar placement. Upon entering the abdominal cavity, extensive adhesions noted. Intraoperative examination revealed phlegmonous appendix. No pus or abscess formation found. No significant adhesions. The surrounding tissues showed diffuse reaction. Bladder and ureters visualized, no injury. Dissection is carried out to isolate the base of the appendix. Mesenteric vessels to the appendix are secured prior to removal. Base of appendix secured with purse-string suture prior to removal. Specimen placed in EndoCatch bag for removal. Copious irrigation is undertaken to ensure removal of all inflammatory debris. Umbilical port site is closed with Maxon 2-0 and skin with Dermabond.

The patient will be continued on IV antibiotics and advanced to diet as tolerated. The patient tolerated the procedure well with minimal blood loss.
