

Exam / Exam

US ABDOMEN/PELVIS- POST-SURGICAL PAIN

Date of exam / Exam Date

May 15, 2022 23:34

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient presenting with vomiting, since yesterday of pain, and unremarkable previous imaging.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No evidence of hepatic steatosis. No abnormal Doppler flow. Gallbladder demonstrates normal wall thickness. The right kidney measures 4.1cm and the left kidney measures 4.1cm. Both kidneys are unremarkable. No focal splenic lesions noted. Bladder demonstrates normal wall thickness. Loss of normal appendix wall layers noted. Moderate free fluid in pelvis. No signs of Crohn's disease. Liver contour is smooth; no masses seen.

IMPRESSION:

Perforated appendix, abscess identified.

Recommend urgent surgical consultation.

Case ID: CASE-WA38OW-14107
