

## # Exam / Exam

US ABDOMEN/PELVIS- PALPABLE MASS

Date of exam / Exam Date

May 31, 2020 20:25

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

15-year-old Female with sudden onset of abdominal pain and history of constipation.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. The liver appears homogeneous. No evidence of cholecystitis. Gallbladder wall is thin. No renal calculi, masses, or hydronephrosis detected. Both kidneys are symmetric in size and show normal corticomedullary differentiation. No focal splenic lesions noted. The bladder is fluid-filled and unremarkable. Appendix not clearly identified despite thorough evaluation. Trace free fluid in pelvis, non-specific. Prominent mesenteric lymph nodes in RLQ, largest 18mm.

### IMPRESSION:

Abdominal pain likely secondary to mesenteric adenitis.

Suggest outpatient follow-up.
