US ABDOMEN/PELVIS- SUSPECTED TUMOR

Date of exam / Exam Date

June 04, 2021 07:46

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Pediatric patient with abdominal distention and tenderness.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

No evidence of hepatic steatosis. No gallstones, wall thickening, or pericholecystic fluid. Renal sinus anatomy is intact. Splenic contour is smooth. The bladder is fluid-filled and unremarkable. Peri-appendiceal abscess seen. No peritoneal fluid collections. Small bowel loops distended, clinical significance uncertain.

IMPRESSION:

Appendicitis complicated by perforation and abscess.

Recommend urgent surgical consultation.

Case ID: CASE-ADUNQF-11446
