

## # Exam / Exam

US ABDOMEN/PELVIS- SUSPECTED CROHN'S DISEASE

Date of exam / Exam Date

December 13, 2021 20:42

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

9-year-old Male with fever, abdominal pain, and elevated WBC count.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

Liver margins are regular and smooth. No abnormal Doppler flow. No gallstones, wall thickening, or pericholecystic fluid. Mildly increased echogenicity of renal cortex; clinical significance uncertain. Spleen appears normal for age. Bladder wall shows no abnormal thickening. Perforated appendicitis with abscess formation and loculated fluid. Moderate free fluid in pelvis. No abnormal bowel wall thickening.

### IMPRESSION:

Perforated appendicitis with complex fluid.

Recommend urgent surgical consultation.
