

Exam / Exam

US ABDOMEN/PELVIS- VOMITING WITH ABDOMINAL PAIN

Date of exam / Exam Date

September 16, 2019 07:04

RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

Child with inflammatory bowel disease and acute abdominal pain.

PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

FINDINGS:

The liver shows mild increased echogenicity, likely due to technical factors. No peri-hepatic fluid seen. No sludge or masses. Renal parenchyma appears homogeneous. Splenic parenchyma is homogeneous. Bladder wall is smooth and regular. Appendix wall shows increased Doppler flow. Loculated fluid in pelvis. Mild ascites noted.

IMPRESSION:

Findings consistent with acute appendicitis.

Recommend urgent surgical consultation.

Case ID: CASE-8EJ2GN-10062
