

## # Exam / Exam

US ABDOMEN/PELVIS- HEMATURIA

Date of exam / Exam Date

May 25, 2023 23:27

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

2-year-old Male presenting with intermittent abdominal pain and vomiting.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

Liver contour is smooth; no masses seen. No evidence of cholecystitis. Renal parenchyma appears homogeneous. No evidence of splenomegaly. No perisplenic fluid collections. Bladder appears normal. Complex RLQ inflammatory mass, dilated appendix (11mm), focal wall defect, free fluid. Loculated fluid in pelvis. Small bowel loops distended, clinical significance uncertain.

### IMPRESSION:

Appendiceal perforation with intra-abdominal fluid.

Recommend urgent surgical consultation.
