

## # Exam / Exam

US ABDOMEN/PELVIS- RLQ PAIN

Date of exam / Exam Date

October 09, 2024 19:37

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

2-year-old Male presenting with intermittent abdominal pain and vomiting.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

No focal hepatic lesions detected. No sonographic findings suggestive of cholecystitis. No evidence of cholecystitis. Renal sinus anatomy is intact. Spleen appears normal for age. No intravesical masses or debris. Technical factors limit visualization of appendix. Complex free fluid in RLQ. Mild bowel wall thickening of terminal ileum.

### IMPRESSION:

Findings indeterminate; repeat ultrasound may be required.

Clinical correlation recommended. If high suspicion persists, consider surgical evaluation.

Case ID: CASE-OHBJJG-10611
