

## # Exam / Exam

US ABDOMEN/PELVIS- PALPABLE MASS

Date of exam / Exam Date

November 14, 2020 19:33

### RENSEIGNEMENT CLINIQUE / CLINICAL INFORMATION:

7-year-old Male with suspected Crohn's disease and abdominal tenderness.

### PROTOCOLE RADIOLOGIQUE / RADIOLOGIST'S REPORT:

ULTRASOUND OF ABDOMEN AND PELVIS WITH DOPPLER

No previous for comparison.

### FINDINGS:

The liver appears homogeneous. The liver is normal in size and echotexture. No sonographic findings suggestive of cholecystitis. Gallbladder wall is thin. No perinephric fluid collections. No focal splenic lesions noted. No intravesical masses or debris. Dilated appendix (11mm) with wall disruption and surrounding complex fluid. Loculated fluid in pelvis. No sonographic evidence of intussusception. The liver shows mild increased echogenicity, likely due to technical factors.

### IMPRESSION:

Appendiceal perforation with intra-abdominal fluid.

Recommend urgent surgical consultation.
